

- (1) The Edward Steve #1, I remember, is the northern most location, with two short adits.  
I don't know what the one to the south is with 200' of rim stripping. Could have been done by Texas Zinc Mineral in 1961 when they had a large drilling/exploration permit on Dry Run Mesa.
- (2) Arrowhead #2 is correct.
- (3) Other disturbed area could be Arrowhead #1.

USGS DOQQs with a transparent topo map overlay are portrayed for the Alkali Water Gap area. Your Fig. 2 from CR-90-A is shown as a blue overlay.

**Edward Steve No. 1,  
Arrowhead No. 2,  
and Unnamed Prospects**

0 250 500 750 1,000 Feet  
1:10,000

1. Are the two northern AUMs both Edward Steve No. 1?
2. Are the two southern AUMs, Arrowhead No. 1 (southern) and Arrowhead No. 2 (northern)?
